Mission Statement: Healing the sick, proclaiming the kingdom of God.

Responding to Jesus’ example of healing the sick and His call to spread the Gospel, CURE International has championed the cause of children in the developing world whose physical disabilities can be corrected or alleviated through medical and surgical intervention. Our teaching hospitals and orthopedic programs currently operate in 20 nations, providing our Spiritual Ministry teams with unique windows of opportunity to pray, counsel, and share the love of God with the patients, families, and communities we serve.

Organizational Overview:

- **CURE** is the largest provider of pediatric surgical care in the developing world. Its hospitals and programs specialize in treating children with correctable conditions such as clubfoot, cleft lip and palate, hydrocephalus, and other physical deformities.

- **CURE** was founded by Dr. Scott and Sally Harrison in 1996 as a result of the intense need for medical and spiritual care they witnessed in their travels to developing nations.

- As a Christian organization, **CURE** incorporates prayer and counseling into every aspect of its care in a culturally relevant manner.

- **CURE** hospitals and programs will not turn away a patient due to an inability to pay, ethnic background or religious affiliation.

More than 1,200,000 patient visits

More than 84,000 surgeries

Over 109,000 expressions of faith

More than 800 nationals trained
Financial Overview

Fiscal responsibility and accountability are critical aspects of CURE’S financial stewardship model. Along with annual audits by a Certified Public Accounting firm, CURE is also a member in good standing with the ECFA. In addition, independent nonprofit rating group, Charity Navigator, has given CURE a four-star rating for eight years in a row.

Our Multiplier Effect:

CURE is able to multiply financial contributions to bring healing to disabled children and their families. In FY 2010, CURE’s development team raised $9.5 million for operational costs, enabling us to deliver over $52.3 million worth of physical and spiritual healing. Every $1 of donor contribution to CURE delivers a total of $5.50 of medical care and spiritual ministry to those needing it most.
CUREkids
In November of 2010, CURE launched CUREkids, a social sponsorship program that allows groups of people to come together to support and fund a child’s surgery. CUREkids uses modern web-based technology and social media tools, such as Twitter and Facebook, to connect a group of people with an individual child and his or her story. CUREkids offers a never-before-available connection with each child, before, during and after the child’s treatment, by providing periodic updates to each of the child’s supporters and donors. As of May 2011, CUREkids has raised support for over 50 children and has more than 1,400 active supporters. Learn more at cure.org/curekids.

CURE Hydrocephalus
In early 2011, CURE initiated CURE Hydrocephalus, a new program to expand the treatment of infant hydrocephalus, a life-threatening condition involving excess fluid in the brain. Since 2000, CURE has become a global leader in the efforts to save the lives of thousands of children in the developing world suffering from this condition through the medical care delivered at the CURE Children’s Hospital of Uganda.

As the program matures, CURE Hydrocephalus will expand our organization’s capacity to train more surgeons, equip them with critical neurosurgical technology, provide patient care staff to holistically minister to the needs of families dealing with hydrocephalic children, and gather data to monitor safety and quality and to support clinical research.

CURE Niger
CURE Niger opened October 18, 2010. It’s the first hospital in the country to offer First World surgical care to children with curable disabilities. The CURE Niger hospital has 24 beds and expects to perform 450 surgeries in its first year.

Patient Stories

Brandy  Dominican Republic

Born with a condition called bilateral congenital knee dislocation, Brandy never learned to walk normally. Often breaking down in tears due to the intense pain, he could only move forward like a duck as his knees were literally twisted backward.

Like so many parents in the developing world, Brandy's mother never hoped to afford the expensive treatments it would take to fix her son's broken body. Just when her hope was at its lowest, Brandy's mother received a call from a sister living in Santo Domingo who had just heard about a hospital in the city specializing in conditions like Brandy's - a hospital that would treat him even though the family could never afford their services.

Filled with renewed faith, she brought her son to CURE Dominicana. Brandy received reconstructive surgery at CURE's Dominicana hospital and underwent intensive physical therapy. Now, 3-year-old Brandy continues to thrive on his newly straightened legs.

Mohammed  Ethiopia

Mohammed is a 12-year-old boy from Ethiopia who fell into a fire as a small child. Due to poor bandaging and the lack of knowledge on the part of his family, the wrapping of the injury resulted in a severe burn contracture that fused Mohammed's right leg to his buttock and left him unable to walk.

Disowned by his parents as a financial burden, Mohammed literally dragged himself for miles to try and seek care. A passerby found Mohammed crawling in the dust and took him to CURE Ethiopia. Mohammed spent a little over a year at CURE's hospital in Addis Ababa receiving multiple surgeries and physical therapy.

Finally, Mohammed was able to walk again and he returned to his village to be reunited with his family; but despite the healing of his leg, his parents still did not welcome him home.

Heartbroken, some of the staff of CURE who accompanied him expecting a joyous reunion, chose to give Mohammed a new home by bringing him to live with their family.

The following two stories are examples of lives that have been changed due to the care received at CURE. Each year, we hear thousands of stories just like Brandy's and Mohammed's. To follow the stories of children CURE is currently healing throughout the world, visit cure.org/curekids.
